

# Home-Page Documentation

The Home Page is the first screen displayed when you log in or register for the application. It is divided into three main sections: the Welcome/ Global Search section, which greets users and includes a search bar for quick navigation; the Explanatory section, which provides a brief overview of the AI Architect, Analog Guide, and AI Improve features; and the Recently Opened Projects section, which lists the projects you have recently accessed, enabling you to easily resume your work.

## Welcome / Global Search Section

In the search field, users can input a keyword, and the application will perform a debounced search, retrieving any Workspace, Project, or Document that contains the specified keyword. If users click away from the search section, the results will retract, but clicking on the search field again will expand the results, allowing users to continue their search seamlessly.

# Explanatory Section

In this section, a brief explanation of each pillar of the web application is provided. Users can click on a card to learn more, and they will be redirected to the corresponding page for that pillar.

**AI Architect**  
The AI Architect generates complete OnePagers based on user-provided text inputs to targeted questions. These AI-created OnePagers are fully editable, enabling users to fine-tune and personalize the output as needed.

**Analog Guide**  
The Analog Guide is a research-backed knowledge base that provides a step-by-step method for crafting effective OnePagers by hand. It empowers users with proven techniques to structure impactful OnePagers with precision.

**AI Improve**  
The AI Improve Tool allows users to upload existing OnePagers for quality assessment and enhancement through artificial intelligence. It ensures polished results by refining content, improving structure, and optimizing visual appeal.

# Recently Opened Projects

This section provides a sorted list of the most recently opened projects across all workspaces. Each project tile displays the project name, the number of One Pagers, the number of uploaded documents, the workspace it belongs to, and includes a button that directs users to the project. Additionally, within each project tile, there is a dedicated section that showcases the One Pagers associated with the project. These One Pagers are arranged in a horizontally scrollable section for easy navigation and can be clicked on to directly navigate towards that OnePager.
